                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               of this sequence, the complementarity determining regions (CDRs) coriginates from murine monoclonal antibody 3D6 and the framework region originates from human germline VH segment DP-45 and J segment JH4. Novel humanised antibodies of the invention have CDRs from 3D6 and human framework sequences. These humanised antibodies have binding affinities (affinity and epitope location) approximately the same as those of the mouse 3D6 antibodies, The invention includes antibodies, single chain antibodies, and their fragments, as well as nucleotide sequences, vectors, transformed host cells, and methods of using the humanised antibody to treat, prevent, alleviate, reverse or otherwise ameliorate symptoms and/or pathology associated with Down's syndrome, (pre-)clinical carebral amyloid angiopathy, and to inhibit formation or reduce Abeta plaque in the brain.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to antibodies that interact with osteoprotegerin ligands (OPGL). The antibody is useful for detecting the level of OPGL in a biological sample. The antibody, or the pharmaceutical composition comprising the antibody, is also useful for treating osteopenic disorder, an inflammatory condition with attendant bone loss, an autoimmune condition with attendant bone loss in a patient or rheumatoid arthritis in a patient. In particular, the antibody or composition is useful for treating bone diseases, e.g. osteoporosis, bone loss from arthritis, paget's disease, osteopenia, endocrine osteoporosis (e.g. Cushing's paget's disease, osteopenia, endocrine osteoporosis (e.g. Cushing's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New antibodies that interact with osteoprotegerin ligands, useful for treating osteopenic disorders, e.g. osteoporosis, bone loss from arthritis, Paget's disease, osteopenia, osteomyelitis, hypercalcemia and osteonecrosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        syndrome or acromegaly), osteogenesis imperfecta, homocystinuria, wenkes' syndrome, Riley-Day syndrome, osteomyelitis, hypercalcemia, or osteonecrosis. The present sequence represents an anti-OPGL-1 antibody
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 1; Fig

chimeric anti-human firbrin heavy chain cDNA open reading
cframe. It was prepd. using Poly(A)+ RNA from the anti-fibrin
cc chimeric Ab-producing transformant FIBI-HOLYAG as a template
cc to clone human C-kappa cDNA, using the oligo-dT (Fharmacia) primer as
ca primer for first strand cDNA synthesis and the 5'C2H and 3'EH
cprimers for the PCR. A human gamma-1 chain CH2-CH2 domaine encoding
cDNA was amplified. Similarly a human gamma-1 chain CH1 domain
ce encoding cDNA and an anti-fibrin antibody VH cDNA and a leader
cpeptide cDNA were amplified using the primers 3'EH; 3'C2H and 3'CH
crespectively as a primer for first strand cDNA synthesis and the
cprimer combination of 5'C1H and 3'C2H, of 5'LH and 3'C1H and of
cyrimer combination of 5'C1H and 3'C2H, of 5'LH and 3'C1H and of
cproducts were isolated and used to produce plasmids. After
confirmation of the cDNA sequence of each plasmid, the cDNA
cencoding LH, VH, CH1 and CH2CH3 were joined toge!:her to give
confirmation of the cDNA sequence of each plasmid, the cDNA
cplasmid pTB1373 contg. the whole length chimeric II chain
(LH, VH, CH1, CH2CH3), also abbreviated as IgH-FIII,

                                                                                           Sequence
                                                                                                                                             versus host disease, conjunctivitis, swelling occumyocardial ischaemia or endotoxin shock syndrome. is human AQC2 heavy chain protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to novel antibodies that specifically bind to very late activation (VLA-1; betal containing integrins) antigens and methods of using these antibodies to treat immunological disorders. The antibodies are useful for preventing or treating VLA-1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New anti-VLA-1 antibodies are useful for preventing or treating VLA-1-mediated immunological or inflammatory disorders, e.g. psoriasis, eczema, burns, dermatitis, and abnormal proliferation of hair follicle
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           13-APR-2001; 2001US-283794P

The T84.12 antibody is directed against the tumour marker carcinoma embryonic antigen, and is useful for tumour imaging and immunotherapy.

The amino acid sequence given in the specification has been incorrectly identified as a nucleic acid sequence, therefore unacceptable characters have been represented as an 'N'. The amino acid sequence given below has been derived from the cDNA, by the indexer.

Sequences of the invention are useful for manufacturing a medicament and for treating cancer including colorectum, non-small cell lung, breast, head and neck ovarian, lung, bladder, pancreatic cancer or metatatic cancers of the brain. They are also useful in antibody therapy. The present sequence is BIWAA/B antibody heavy chain mature protein. This sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              В
The invention describes an isolated mucin-1-specific binding member having an antigen binding domain including a region that comprises a specific amino acid sequence. The inventive MUC1-specific binding member is used in the diagnosis and/or treatment of cancer, e.g. adenocarcinoma, found in various tissues, e.g. breast, ovary, bladder, and lung. It can be used alone or as a component in a more complex anti-cancer regimen which may contain anti-cancer drug(s) and/or radiation treatment(s). The inventive binding member recognizes tumour-associated MUC1 on adenocarcinoma. Its affinity is high enough to bind to tumour cells. This is the amino acid sequence of a mucin 1 (MUC-1) specific antibody region used to isolate MUC-1 antigen binding domains for use in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Mucin-1-specific binding member; human; cancer; adenocarcinoma; breast cancer; ovarian cancer; bladder cancer; lung cancer; anti-cancer regimen; anti-cancer drug; radiation treatment.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents the heavy chain variable region of a rat immunoglobulin G (IgG) antibody which is specific for the CD3 antigen complex, and the human CH1-hinge-aglycosylCH2CH3. The specification describes chimeric human/rodent anti-CD3 antibodies, which have a rodent CD3 light chain variable region and a human heavy chain variable region. The anti-CD3 antibodies can render T-cells non-functional by antibody blockade of the CD3 antigen-T-cell receptor (TCR) complex. They can be used for immunosuppression, particularly for the control of graft rejection. The antibodies can also enhance or re-direct T-cell responses to antigens. They can be used in the treatment of cancer.

                                                                                                                                                                                                      В
                                                                                                   20
                                                                                                                                                                                                                              The invention relates to an isolated tumour-assoc.ated antigen mucin-1 (MMC-1)-specific binding member comprising an antigen binding domain (CC region having an antibody variable light (VL) or leavy (VH) region, CC or a complementarity determining region (CDR) of 'L or VH. MUCI-specific binding member is useful for diagnosing cancer, p:eferably adenocarcinoma CC binding member is useful for diagnosing cancer, p:eferably adenocarcinoma CC magnetic resonance imaging, scintillation counting, and x-ray film. CC magnetic resonance imaging, scintillation counting, and x-ray film. CC magnetic resonance imaging, scintillation counting, and x-ray film. CC magnetic binding member is useful for treating cancer, preferably CC adenocarcinoma, in an individual, where the cancer is present in tissue CC of the breast, ovary, lung, or bladder of the individual. MUCI-specific binding member is useful for diagnosing and imaging MUCI-specific CC binding member is useful for diagnosing and imaging MUCI-specific CC containing molecules, and for therapeutically or prophylactically cancer. The present sequence is human recombinant immunoglobulin CC (Ig) heavy chain region (variable VH and CH constant heavy chain).

The antibody is useful to inhibit and reduce the formation of amyloid plaques or the effects of toxic soluble Abeta species in humans their fragments are used for the manufacture of a medicant. This includes the prolonged expression of recombinant sequences of them in human tissues for the treatment of clinical/pre-clinical Alzheimer's disease, Down's syndrome or pre-clinical cerebral amyloid angiopathy. Specifically, the antibody is used to sequester Abeta into plasma, brain or cerebrospinal fluid to prevent/reverse accumulation of the Abeta peptide within the brain thereby improving cognition. The present sequence is the heavy chain of a humanised monoclonal antibody, Hu266, based on the mouse antibody 266.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Chumanised antibody of the present invention. In the variable cregion of this sequence, the complementarity determining regions (CDRs) originate from murine monoclonal antibody 3D6 and the framework region from human germline VH segment DP-45 and J segment that Novel humanised antibodies of the invention have CDRs from 3D6 and human framework sequences. These humanised antibodies have binding affinities (affinity and epitope location) approximately the same as those of the mouse 3D6 antibody. The invention includes antibodies, single chain antibodies, and their fragments, as well as nucleotide sequences, vectors, transformed host cells, and methods of using the humanised antibody to treat, prevent, alleviate, reverse or otherwise ameliorate symptoms and/or pathology associated with Down's syndrome, (pre-)clinical anyloid angiopathy, and to inhibit formation or reduce Abeta plaque in the brain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                      The invention relates to polynucleotides encoding novel human controlled in a method of contibodies raised against the polypeptides are used in a method of treatment of a mammal and prevention of disorders caused by the aberrant controlled respectively. The polypeptides can be used as controlled respectively. The polypeptides can be used as protein expression or activity. The polypeptides can be used as controlled respectively and in antibody production. The polypeptides are used to identify compounds which bind to the controlled respectively. The polypeptides and proteins and in generating anti-sense DNA or controlled respectively. The invention are used as probes and controlled respectively. The polypeptides and in generating anti-sense DNA or controlled respectively. The invention can be used to controlled respectively. The invention can be used to controlled respectively. The invention can be used to controlled respectively. The invention is tissue markers, and to isolate receptors or ligands. Controlled respectively are called the controlled respectively. The invention can be used to controlled respectively. The invention is the controlled respectively. The invention is the controlled respectively. The invention can be used to controlled respectively.

The invention relates to an isolated human monoclonal rabies virus neutralising antibody (virucide) derived from cDNA clones encoding the antibody heavy and light chains expressed in heterologous expression systems and purified away from deleterious contaminants. The invention provides a fused gene encoding a chimeric immunoglobulin light chain and a fused gene encoding a chimeric immunoglobulin heavy chain. The antibody of the invention is useful for treating an individual exposed to a rabies virus by administering to the individual a therapeutically effective amount of the antibody, and preventing a spread of the rabies virus to the central nervous system (CNS). The antibody of the invention provides a safe and efficacious positions.

The invention discloses a recombinant antibody comprising a constant cregion of monoclonal antibody (Mab) 57 linked to a non-Mab 57 variable cregion. Rables is an acute, neurological disease caused by infection of the central nervous system with the rables virus, a member of the CL Lyssavirus genus of the family Rhabdoviridae. Also disclosed are methods cromportion of the family Rhabdoviridae. Also disclosed are methods cromportion of the family Rhabdoviridae. Also disclosed are methods cromportion of the combinant antibody by sulturing a host cell, containing a recombinant expression vector comprising the nucleic acid conclecule encoding the antibody, and isolating the recombinant antibody capressed and treating an individual exposed to a pathogen by compressed and treating an individual exposed to a pathogen, e.g. rables infection. They are also useful for the gualitative and guantitative determination of the rables virus. The sequences presented are the antibody protein fragments, the nucleic acids concoding them or the PCR primers used to construct the recombinant conversion vector.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New recombinant antibody comprising a constant region to a non-Mab 57 variable region, useful for treating a exposed to a pathogen, e.g. rabies infection
                                                                                                                                                                                                       expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Example 1; Page 32-33; 38pp; English.
